

## 80 STL Staurolite Waterjet Abrasives

---

BARTON 80 STL is a staurolite abrasive engineered to meet our highly regarded safety and performance standards for waterjet cutting. 80 STL is part of our new ECOTEK® line of economical, domestically produced waterjet abrasives developed to serve the growing need in the industry for low-cost abrasives from reliable American sources.

A naturally occurring mineral, 80 STL is produced from a one-of-a-kind mining and milling process in Florida, USA. 80 STL is processed to ensure proper grading for waterjet cutting, and it complies with the same strict health, safety and environmental standards as our garnet abrasives.

80 STL is a low-cost solution for all waterjet cutting applications. The abrasive performs comparably to BARTON HPA® garnet and provides consistent, quality performance.

## Using BARTON 80 STL

Calibration of the abrasive feed rate will ensure proper abrasive flow.

**As with any abrasive change, calibration of the abrasive feed rate may be required to ensure proper flow of 80 STL to match the recommendations on the OEM feed rate chart.**

Please refer to the manufacturer's instructions for abrasive calibration. A general step-by-step guide to testing your abrasive feed rate is available on our website.

As with all of our products, BARTON stands behind ECOTEK STL waterjet abrasives with our 100% Quality Guarantee.

BARTON 80 STL is a competitively priced, general-purpose abrasive designed to serve all waterjet cutting applications. Please contact your regional sales manager for more information and to arrange a no-charge trial of the material.

Further information, including the Safety Data Sheet (SDS) and Technical Data Sheet, is available on our website at [www.barton.com](http://www.barton.com).

**Standard Packaging:** 55-lb. paper bags, 2,200-lb. bulk bags
