FUSION® Custom Abrasive for Surface Preparation

FUSION® is a perfectly balanced, custom blend of ALLTEK™ alluvial garnet and ECOTEK® STL staurolite. It has been carefully engineered as a high-performance blasting abrasive that balances cleaning speed and surface quality with operating cost.

A BALANCED BLEND OF TWO PROVEN BLASTING ABRASIVES

ALLTEK garnet abrasives produce a clean surface with a uniform profile virtually free of particle embedment for better coating adhesion and longer coating life.

Blasting with ALLTEK garnet significantly increases productivity while producing less dust. The result is improved visibility, less disruption to adjoining work areas, and safer working conditions.

Domestically produced from reliable American sources, ECOTEK STL is an economical staurolite abrasive designed to meet the most stringent industry and military specifications.

The perfectly balanced combination of these two proven BARTON abrasives offers unprecedented performance and surface quality at a value price.

FUSION is a 100% natural, non-ferrous inert mineral abrasive with <0.1% respirable crystalline silica and no heavy metals. All BARTON abrasive products are manufactured under tight Quality Assurance controls and are guaranteed to meet our high standards. **SSPC AB-1** and US Navy **Mil-A-22262B(SH)**, **QPL listed** and **CARB certified**.

FUSION 80

- Used on steel, aluminum and other sensitive substrates.
- Typically produces a 2.0-2.8 mil profile on steel.

Standard Packaging: 55-lb. paper bags, 2,200-lb. bulk bags

On The Cutting Edge Since 1878
