

# HYDROBLOC<sup>®</sup> Superbrick Durable and Long-Lasting

HYDROBLOC Superbricks are designed and manufactured to fully support parts during the waterjet cutting process. Made in the USA with a proprietary polypropylene material, the bricks use a laminated pattern to minimize splash back from the waterjet while draining water and debris away quickly and effectively.

- **Part Retention:** The flat cutting surface prevents small parts from falling into the tank.
- **Better Looking Parts:** Eliminates spray back that can mark the underside of parts.
- **Cleaner Cutting:** Internal design drains water away from the cutting area, reducing splash back.
- **Quieter Operation:** Cutting noise is reduced, creating a quieter workspace.
- **Flexibility:** Can be used with abrasive waterjet cutting and water-only cutting.
- **Durability:** The tough polypropylene material will not separate, allowing for more cuts and greater savings.
- **Less Brick Debris:** Easier on garnet removal systems.
- **Recyclable:** The polypropylene material is 100% recyclable.
- **Lightweight:** A standard brick weighs 11 lbs.
